PROJECT PORTFOLIO

Nguyen Huyen Minh Nhat

COMPUTER SCIENCE / DATA SCIENCE MINOR

Building practical web experiences, learning from data, and improving software through iteration.

PROFILE

Who I am & what I work on

Final-year Computer Science student at Swinburne University of Technology — Vietnam. I work at the intersection of frontend interfaces, backend services, databases and data analysis.

01 / Build

React interfaces and end-to-end user flows

02 / Integrate

Database, authentication, payment and APIs

03 / Improve

Testing, release hardening and data-informed thinking

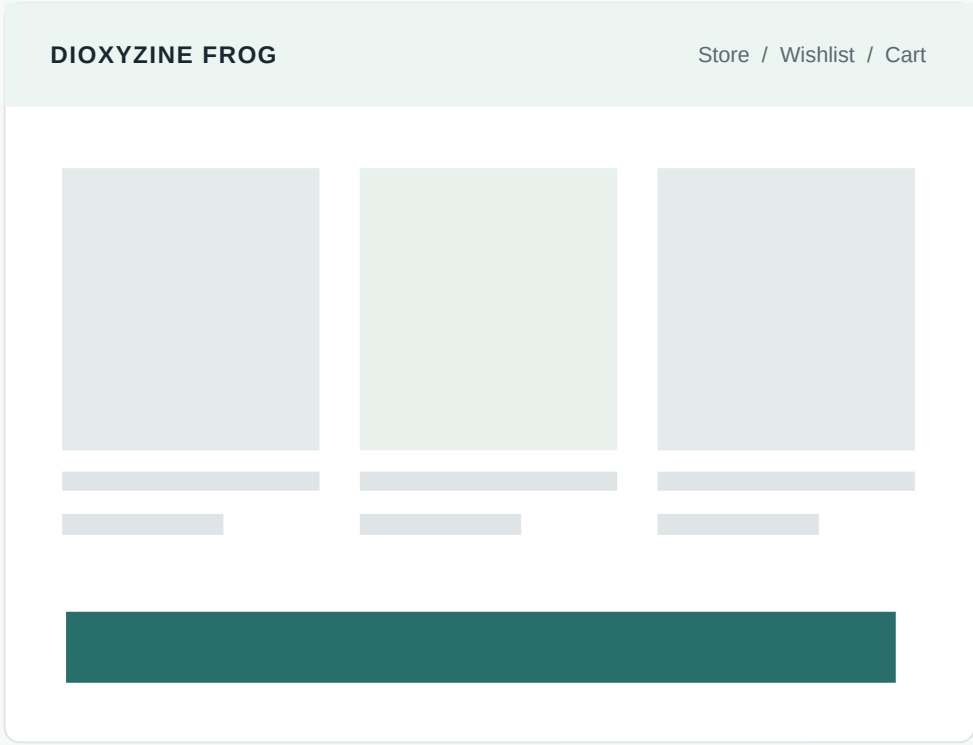

FEATURED PROJECT

Dioxyzine Frog

Custom-plushie & accessories e-commerce

Independent Full-Stack Project

A retail web application spanning storefront interactions, customer accounts, checkout and order-management journeys. I developed and maintained product features while working across frontend, backend integrations and deployment.

ILLUSTRATIVE UI DIAGRAM (NOT A PRODUCT SCREENSHOT)

React / Vite

Supabase

Vercel

Payments

From customer flows to secure deployment

Product flow

Browse	Catalogue
Cart	Selections
Checkout	PayPal Sandbox
Account	Orders / Tracking

Engineering highlights

01 **Supabase**

Auth, PostgreSQL and Edge Functions

02 **Security**

RLS, Storage and RPC permission hardening

03 **Delivery**

GitHub PRs, Vercel config and release checks

04 **Integrations**

PayPal Sandbox, EmailJS and Cloudinary

Evidence: github.com/NhatNguyen2407/Project/pull/6

COLLABORATIVE PROJECT

D'Capitale Residential Management

Role / Project Contributor

A residential services application with two main experiences: residents and employees. The codebase uses React 19 and Material UI on the frontend, with PHP and MySQL on the backend.

Resident experience

Home and services • History and profile • Incident reporting

Employee experience

Administrative dashboard • Requests and reports • Incident review

TECH STACK React 19 / Material UI / PHP / MySQL

COS30045 — Data Visualisation

Using KNIME to transform, explore and communicate datasets.

01

Clean

String cleaner
Row filtering

02

Transform

GroupBy
Pivot tables

03

Visualise

Bar charts
Category comparisons

04

Critique

Dashboard review
Chart effectiveness

Academic focus: careful preprocessing, appropriate chart selection, and evidence-based evaluation of existing visualisations.

How I approach software projects

FRONTEND	React, JSX, Vite, HTML/CSS, Tailwind, Material UI
BACKEND	Supabase, PostgreSQL, Edge Functions, PHP/MySQL exposure
DELIVERY	Git, GitHub PRs, Vercel, deployment and production checks
DATA	KNIME, dataset preparation, aggregation and critique

Selected public evidence: GitHub PR #1 (security) · PR #6 (pre-launch hardening)

CONTACT

Let’s build something useful

Interested in software development, frontend/full-stack internships, data-oriented projects and graduate study.
